

Research shows that the nutritional status of both women and men can impact fertility. We also know that specific variations in our genes can explain why some of us respond differently from others to the same foods, beverages and supplements we consume.

Learn how your

genes can affect:

Cardio-Nutrient metabolic Metabolism Health Food Fertility Eating Habits Intolerances Weight Physical Management Activity

The answer may be in your genés

- Comprehensive genetic test consisting of 70 genetic markers.
- Developed by world-renowned researchers.
- Genetic tests based on the most robust scientific evidence.
- DNA analyzed using a simple saliva or cheek swab sample.
- Personalized recommendations developed based on your unique genetic profile.
- Contact your healthcare provider to get started and eat according to your genes!
